Innovative breastfeeding aids designed to support
the mother and child from the very first minute

Innovation in breastfeeding support

Materni's breastfeeding aids are produced in Clean Room ISO Class 5 aseptic sterile conditions. Clean-by-Manufacturing (CBM) production and products are now accepted as the new standard by the Belgium and French authorities. We eliminate the use of Ethylene Oxide or Irradiation sterilisation. Our vision: Zero chemicals, local production, sustainable, innovative and affordable. Our innovative breastfeeding aids support mother and baby from the very first moment. Materni's FlowSpoon® and FlowCup® are suitable medical devices for Oral Rehydration Therapy (ORT).

Colostrum administration first

The soft and flexible FlowSpoon® allows safe collection and efficient administration of colostrum milk and Oral Rehydration Solution (ORS). The spoon is individually packed and protected until point of use.

Safe and controlled cupping

Materni's FlowCup® is a unique, simple and affordable cupping device for the administration of expressed breast milk and ORS. FlowCup® helps to avoid nipple-teat confusion and allows feeding at the natural pace of the baby, on top of being cheiloschisis friendly. No leakage or spillage. No milk-saliva mixing. Its simple design and intuitive use offer feeding flexibility to both professionals and parents. FlowCup® is individually packed & ready to use.

We offer 2 designs:

The **FlowCup® M1** was originally designed with a bridge to help control the milk flow in order to follow the baby's pace.

The **FlowCup® M2** was developed in close collaboration with healthcare professionals. Its design permits administration till the last drop while still offering a slow and controlled release.

FlowCup® M1
